DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-22 are drawn to an output frame, classified in class 438, subclass 464.
- II. Claim 23-29, drawn to a method of die sorting, classified in class 209, subclass 573.

Inventions III and I are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case, the method does not require the specific output frame of claim 1. For example, the method of claim 23 does require an adapter frame, however, the adapter frame of claim 23 need not necessarily include at least one channel along the upper surface of the output frame, or a barrier located at the closed end of each channel, or a retention mechanism for each of the plurality of die carriers.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
